Priority Number(s):
IPC Classification: C07C11/18; C07C7/20; C07C11/167; C07C13/15; C10G9/00; C10G9/12; C10G29/20
EC Classification:
Equivalents: JP3187345B2

Abstract

PROBLEM TO BE SOLVED: To provide a method for producing olefins, high in effect of preventing polymerization, excellent in effect of preventing contamination, and capable of operating continuously and stably for extended periods by reacting a stock oil incorporated with a piperidine-1-oxyl and N,N-di-substituted hydroxylamine.

SOLUTION: This method gives olefins by reacting a stock oil incorporated with a combination of (A) at least one type of piperidine-1-oxyl compound shown by formula I (R<1> is a 1-3C alkyl; and R<2> is H or the like) (preferably 2,2,6,6-tetramethylpiperidine-1-oxyl or the like) or formula II (R<5> is a 1-3C alkyl) (preferably 2,2,6,6-tetramethyl-4-oxopiperidine-1-oxyl), preferably at 1 to 10 wt.ppm based on the stock oil, and (B) at least one type of N,N-di- substituted hydroxylamine (preferably N,Ndiethylhydroxylamine or the like), preferably at 1 to 10 wt.ppm based on the stock oil.
